

AI Fluency: Framework & Foundation

(Anthropic)

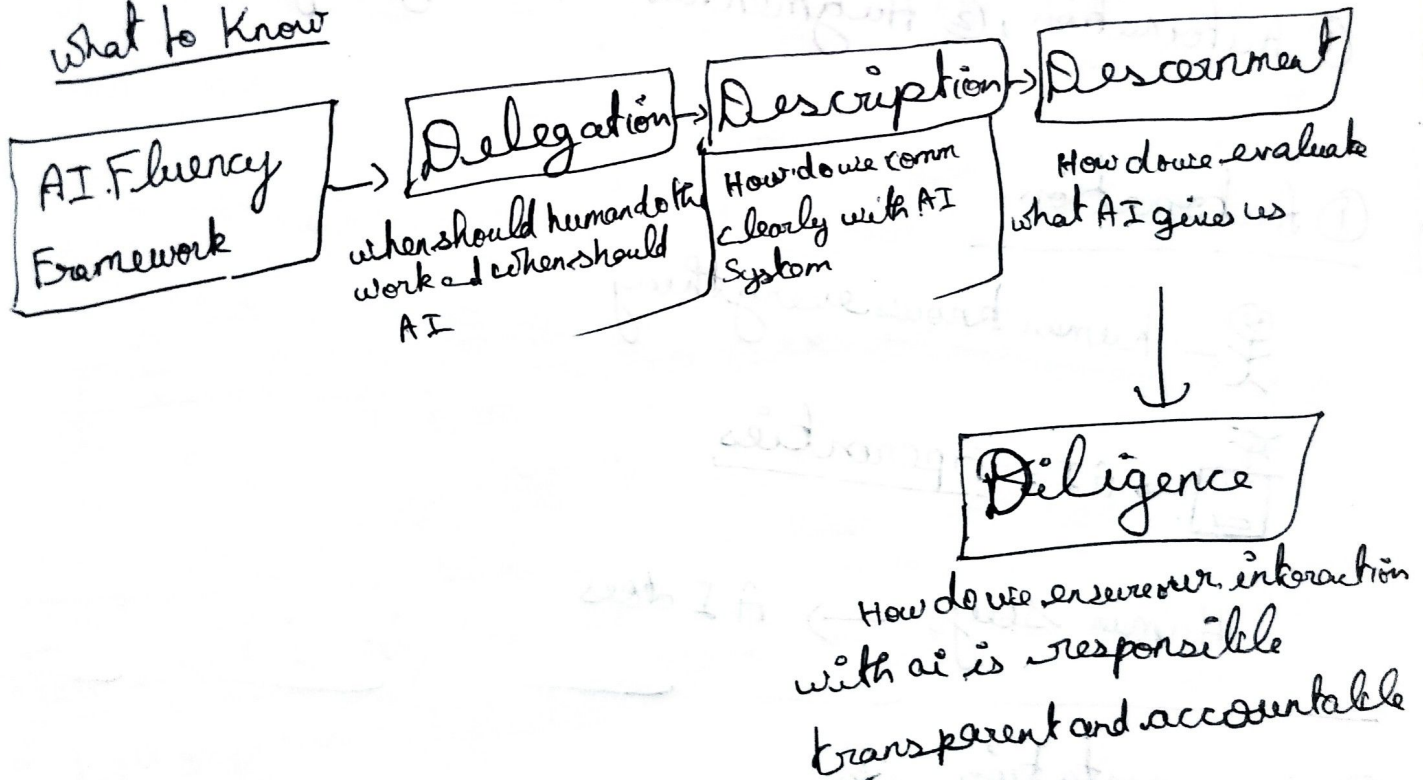

Effective, efficient, Ethical, Safe

This course gives strategies to use AI

we need to understand → what's possible and what's comfortable and intuitive

What to Know

4-D

Creation Diligence: what AI system can use and how you interact with them

Transparency Diligence: Honest about AI's work in role in your work with everyone who needs to know

Deployment Diligence:
responsible for verifying and vouching for the output you use or share

Human - AI interaction Modes

① Automation, ② Augmentation, ③ Agency

① Automation

 → human knows everything

 → AI = Apertories

Human says → AI does

② Augmentation

 and  → both combine - plan, work, reframe, iterate

Human + AI → work together → goal

③ Agency

 → AI does everything

 → final goal

repair —  — Plan's
finds mistake
works — Queries
Thinks

 — Human tells what to do, and the final "Goal" clearly →

 — AI does "everything"

 → goal —  → does everything
↑ I thinks

① Few-Shot learning (n-Shot prompting) — (showing examples)

② Role or persona definition

↳ ("Speak as a UX design expert")

or
(Explain this like Richard Feynman)

③ Think - first Approach

ask AI to go through its reasoning process

→ which can lead to more thorough and well-considered responses

Generative AI

Generates → Text, image, video, audio, music
this is possible because of 3 main things

① <u>Algorithms</u> Neural Networks Transformers	② <u>Data</u> Articles and websites code and multimodal content	③ <u>Computation</u> GPU, TPU etc computing clusters
--	--	--

Scaling Law

They are simply next word high predictive model

Training, fine tuning,

AI Context window

Capabilities and Limitations

Capabilities

Limitations

hallucination, AI Context window

RAG, MCP

Humans Provide 😊
Critical thinking
Judgement
Creativity
Ethical oversight

AI - Provide 🤖
Speed
Scale
Pattern recognition
Processing ability

A closer look at Delegation

Delegation - Effective, Efficient

- ① understanding the problem you're trying to solve [P]
- ② Understanding the capabilities of available AI tools [C]
- ③ Breaking down complex work into smaller parts [1 2 3 4]
- ④ Making strategic decisions about who does what [Role]
- ⑤ Choosing the right mode of interaction [Plan fast mode]

★ Be a Problem aware person

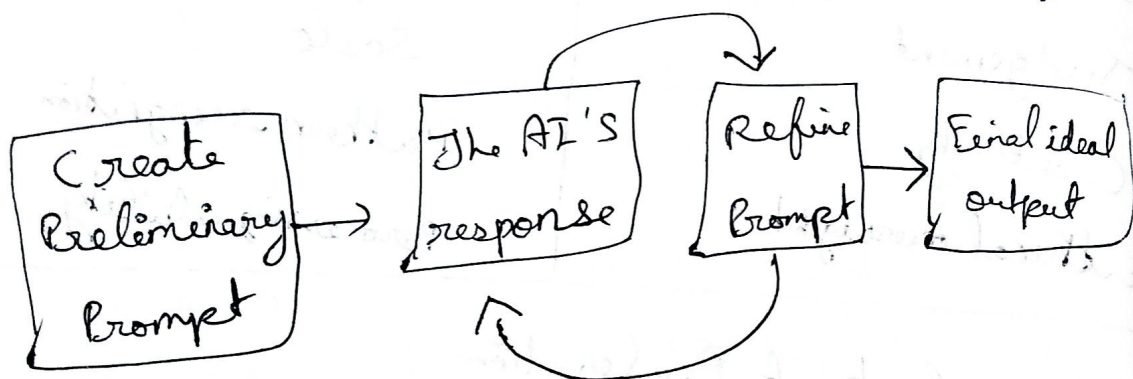

★ Take Delegation → thoughtfully distribution works between humans and AI

() what can be automated, where can be augmented

Delegation → { Problem awareness → goals & Problems to be solved
Platform awareness → understand AI cap & lim
task Delegation → dividing the work

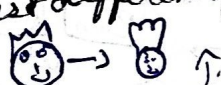

Effective Prompting Techniques (Description Part)

- ⊙ add more specificity or context
- ⊙ Provide examples of your desired outputs
- ⊙ Break the task into smaller steps
- ⊙ Try a different technique or combination of techniques

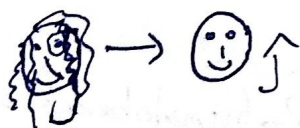

Other techniques

Ask for variations ^{Δ□□} → give me three different variations of this?

Request different formats → Instead of a paragraph, could you present this as an interactive artifact?

Check Claude's confidence → For factual questions ask: How confident are you about this answer?

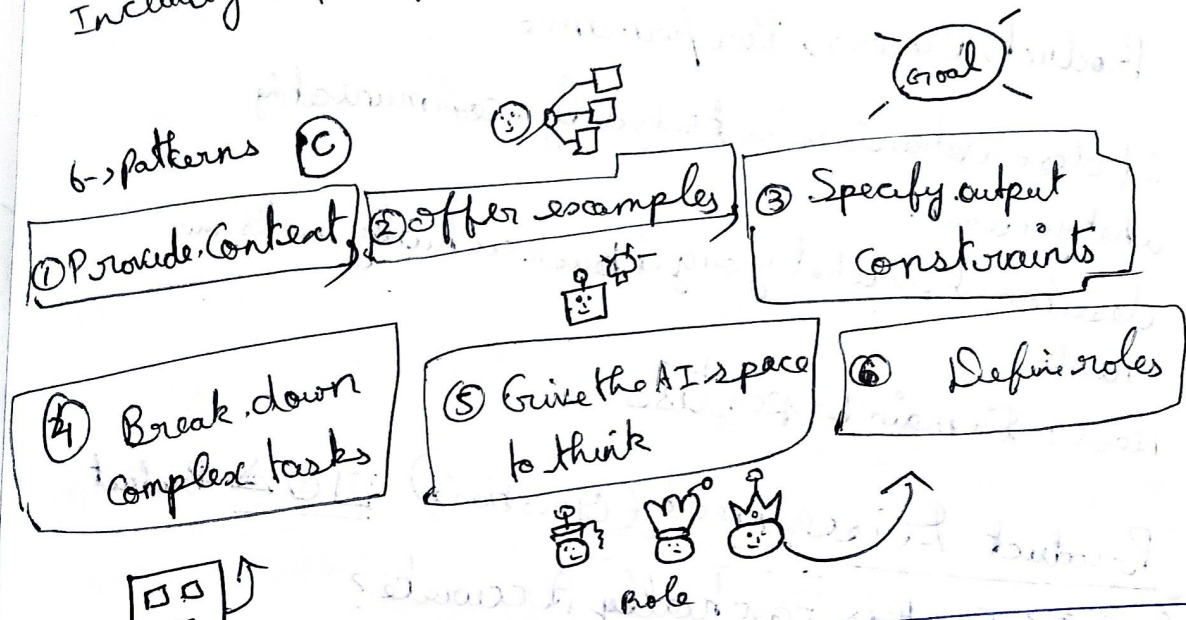

Reset the conversation → Sometimes starting fresh gives better results

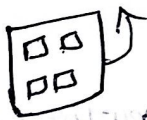

Patterns - that - work well

Starting with a clear task overview statement

Including output format specification and examples

Ex:

The important prompt that I learned here is

I'm trying to get you, Claude, to help me with [goal]. I'm not sure how to phrase my request to get the best result. Can you help me craft an efficient prompt for this?

Giving The AI Thinking Space

Before answering, Please think through this problem carefully. Consider the different factors involved, potential constraints and various approaches before recommending the best solution.

The Decisionmaking or (Dis)corment

① Evaluation, ② Critical thinking, ③ quality

Product, Process, Performance

If description is about clearly communicating what you want.

dis(agree)ment is what you get back actually meets your needs

Need: Domain Expertise

Product Dis(agree)ment (Question's) Product

① ① ~~Is~~ Is this Factually Accurate?

② ② " " Appropriate to audience and purpose?

③ ③ " " Coherent and well-Structured?

④ ④ " " Does it meet my requirement?

⑤ ⑤ " " Does it add value?

①...⑤ → The ability to judge the accuracy and value of AI created output

Process Discernment $\rightarrow$

Key $\rightarrow$ How actually AI got their

- ① ① Logical inconsistency
 - ② ① Lapses in Attention
 - ③ ① Inappropriate steps
 - ④ ① Getting stuck on one small detail
 - ⑤ ① Getting trapped in circular reasoning
 - ⑥ ① The Ability to judge the quality
- You and AI thinking in sink

Performance Discernment

- ① Is the communication style appropriate?
- ② Is the information at the right level?
- ③ Is response to feedback appropriate?
- ④ Is the interaction efficient or unnecessarily complex?

Ex: The AI asking too many question when you need concise answers or is it too brief when you need comprehensive information?

Feedback and Correction

Effective feedback includes

- Specify what the problem is
- Clearly explaining why it is a problem
- Providing concrete suggestions for improvement
- Revising your instructions or examples

Key Takeaways ①-③

- ① Discernment evaluates how well you needs were met
 - ② A continuous loop of instruction and evaluation drives quality
 - ③ Discernment ensures that our AI collaboration remains guided by human judgement
-

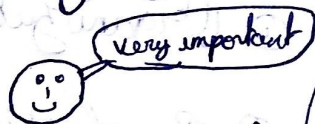

Diligence

Taking Responsibility 

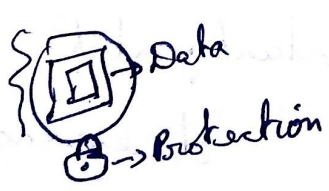

Ask (how to be Diligence while work with this Project)

be critically thoughtful (mean analysing and understanding things)

How is the system trained and build, what data was used who owns the data, Who may have access too once its shared, How am i protecting the privacy and security of myself and others, What other impacts does the system have, How does this interactions aligns personal professional values or with my organizational Policies

Before sharing sensitive company info to AI  

Whether this services has data protection and policies in Place  or you organization permit such sharing

Creative Diligence 

- ① Who need to know AI work role in this work?
- ② How and when should I communicate this?
- ③ What level of detail makes sense to share?

Meeting the expectation for transparency. ↗

(The whole point) 😊

General info :)

- ① verify facts, ② Check for biases, ③ Ensure accuracy
- ④ Check for usage rights ⑤ And so on...

Ethical frameworks

① Personal Guidelines (your rules)

② Organizational policies (org-rule) ← professional

③ Professional standards ←

④ Industry codes and condition ←

⑤ Legal and regulatory frameworks

⑥ Saying informed is an important part at

diligence

Takeaway

- ① AI use should be not only effective and efficient but also ethical and safe
 - ② Diligence reminds us that our interaction with AI comes with responsibility
 - ③ We all want AI that is fair and safe and it benefit to our society
 - ④ Our own behaviours play a key role in making this happen
-

Wrapping Up (bye...bye...) ☺

↳ remember the 4 D

↳ 3 layers of interaction (Automation, Augmentation, Agency)

Delegation

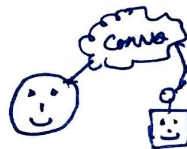

- ↳ Domain Expertise in the foundation
- ↳ Leverage the strength of both human and AI

Foundation

Description

- ↳ Clear communication is key
- ↳ Context, examples and Conversation

Discernment

- ↳ Critical evaluation of A.I. output is our responsibility
- ↳ Discernment skills mitigate AI limitations and enable capabilities

Diligence

- ↳ Maintain accountability for AI interactions; output and impacts
- ↳ Transparency builds trust and integrity in our work

And... Finally Play with Additional activities
