

Agents and Workflows

scattered context → useful output

☁ → the agent handles the organizing manual work

you - judgement, decision, direction

① - Set the goal, ② Direct the work

③ Review and improve the output, ④ Reuse what works

what your agent will build - 1.3

Skills → instructions, examples, preferences.
and Supporting resources

2.2 What an agent needs to do a good job

Goal, Context, Construction (boundaries), Output, Review check
(Improve the instructions and try again)

2.4 Start with one workflow

Context — Direct — Improve — Reuse

Context → Coursework flow → creating a Project Brief document

useful, concrete, Easy to review, clear output
(It has a specific job)

Good Direction

↳ Give an agent

→  (goal, context, clear output)

Lesson - 3.2

What are the main project goal, risks or concerns appear in the notes, decisions have already been made; information still seems unclear or incomplete?

4.2 -> Package -> Review the workflow

-> use - Skills to continue the flow and pitch of your workflow

4.3 Questions to ask while in workflow

My Role:

Tasks I do often:

Tools & sources I use:

Recommend 3 practical workflows. I could try next

For each one, tell me:

- Why it is a good fit, - what output it would create

- what context I would need to provide

Keep the recommendation practical & easy to test

5.2 Reflect on what you learned

What did the agent handle well?

What needs your judgement?

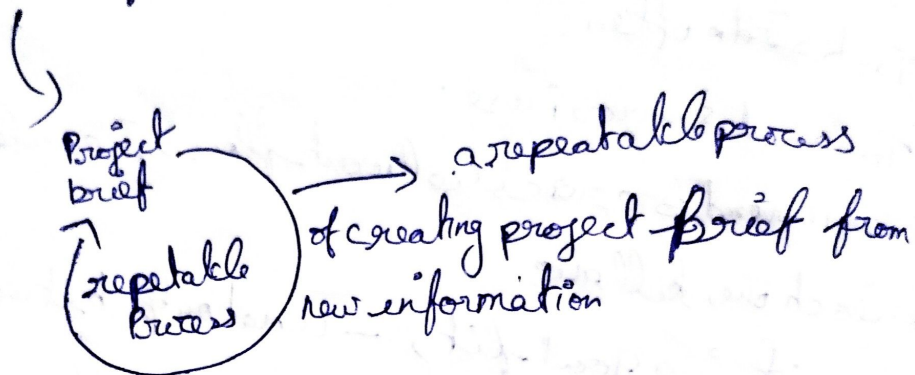

What did you improve after the first draft?

What would need to be done before you could share this workflow?

How should we start while handling things to an agent

① Project brief - Lesson 3.2

② Project brief workflow

③ Project Brief Skill

a reusable version that captures the instructions, structure and output format you've developed throughout the course

The foundation : ↴

① Gather the context → ② Define the goal → ③ Specify the output

↴ ④ Generate a draft → ⑤ Review carefully

↴ Improve the instructions → Reuse what works

⑥

⑦
